Freelancer flow

Accept work and submit milestones

Profile

Wallet, reputation, and history

01

Create a verified profile

Set your role, skills, portfolio, and identity once. SkillX uses your wallet as the account anchor.

02

Work through milestones

Clients post structured jobs, freelancers accept open work, and each milestone moves in order.

03

Settle with escrow

Funds stay locked until approval, then payment releases through the on-chain escrow flow.

The Problem

No Trust Layer

Freelancers and clients have no reliable way to verify identity, track reputation, or enforce accountability. Without on-chain proof of work history, every new engagement starts from zero trust.

Payment Risk

Delayed or withheld payments are a persistent threat. Without escrow or milestone-based fund locking, freelancers bear full financial risk after delivering work, and clients lack structured payment controls.

Fragmented Coordination

Milestones, deliverables, and approvals are scattered across emails, spreadsheets, and chat apps. There is no single workflow that ties job scope, progress tracking, and payment release together.

The Solution

Unified Workflow

SkillX brings jobs, milestones, escrow, and reputation into a single on-chain workflow.

Clients post jobs, define milestones, and fund escrow — freelancers deliver, submit, and get paid automatically upon approval.

Built-In Trust Layer

Smart contracts on Stellar handle every state transition — from job creation to final release.

Reputation scores update on-chain after each completed milestone, creating a transparent, verifiable track record.

The Product

The SkillX interface brings together everything clients and freelancers need in one place. Browse the marketplace with skill-based filtering, manage active jobs from a unified dashboard, track milestone progress in real time, view detailed freelancer profiles with on-chain reputation scores, and stay informed with instant notifications — all in a clean, intuitive UI built for Web3 workflows.

How It Works

SkillX

01 Connect Wallet

02 Create Job + Milestones

FREELANCER ONBOARDS & SCOPE IS DEFINED

03 Fund Escrow

04 Accept → 05 Submit

FUNDS LOCKED ON-CHAIN,
WORK BEGINS

06 Approve

07 Release Payment

Client confirms & escrow
auto-releases

Built on Stellar

- React + Vite + Freighter (Frontend)
- Express + Supabase (Backend)
- Rust + Soroban (Smart Contracts)

4 On-Chain Contracts: Job Manager · Milestone Manager · Escrow · Reputation
All contract logic is deployed on the Stellar blockchain via Soroban.

Why SkillX?

On-Chain Lifecycle State

Every job, milestone, and payment state is recorded on-chain via Soroban smart contracts. No off-chain ambiguity — the blockchain is the single source of truth for every freelance engagement on SkillX.

Milestone Escrow & Reputation

Funds are locked in a Soroban escrow contract and released only upon milestone approval. Every completed job builds an immutable on-chain reputation score, making trust verifiable and portable.

Skill Discovery & Transaction UX

Clients filter talent by verified skill tags for precise matching. Every escrow action — fund, approve, release — is surfaced as a clear, actionable prompt so users always know exactly what to do next.

Built With Users

57 FEEDBACK RESPONSES

We actively collected user feedback throughout development. 57 total responses were gathered from freelancers and clients,

7 TRACKED REQUESTS

From 57 responses, 7 distinct feature requests were formally tracked on the product roadmap.

6 SHIPPED • 1 OPEN

6 of 7 tracked requests have been fully shipped and are live in the product today.
